

(a) Within-task robustness, PHM2010 D1/D2/D3 × 9 methods
(color = within-task-metric benefit; numbers = raw values)

(b) Multi-task TCN-GRU → DC-PSR paired gain, PHM/NASA/MTW-CM
(Smooth/Jump = benefit = backbone - DC-PSR; positive = improvement)

(c) Dataset-profile cards: Multi-task TCN-GRU vs DC-PSR only
(NASA/MTW-CM never evaluated all 9 methods)

(d) Classification-consistency balance: 6 real points
(method × dataset), B11→B12 connector per dataset
