

(a) Predictive performance across A1→A6
(Smooth shown as improvement vs A1, %)

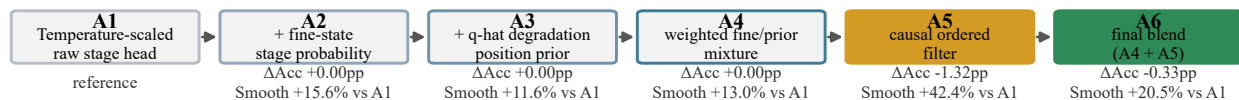

(b) State-wise recognition profile
(E/M/L-F1)

(c) Middle-stage recall & transition error: classification
largely unchanged A1–A4 despite shifting probability geometry

(d) Lifecycle probability variation (local + cumulative);
Rev=Jump=0 for all A1–A6 (real)

(e) A1→A6 mechanism progression: module changes and real Δ vs A1
