
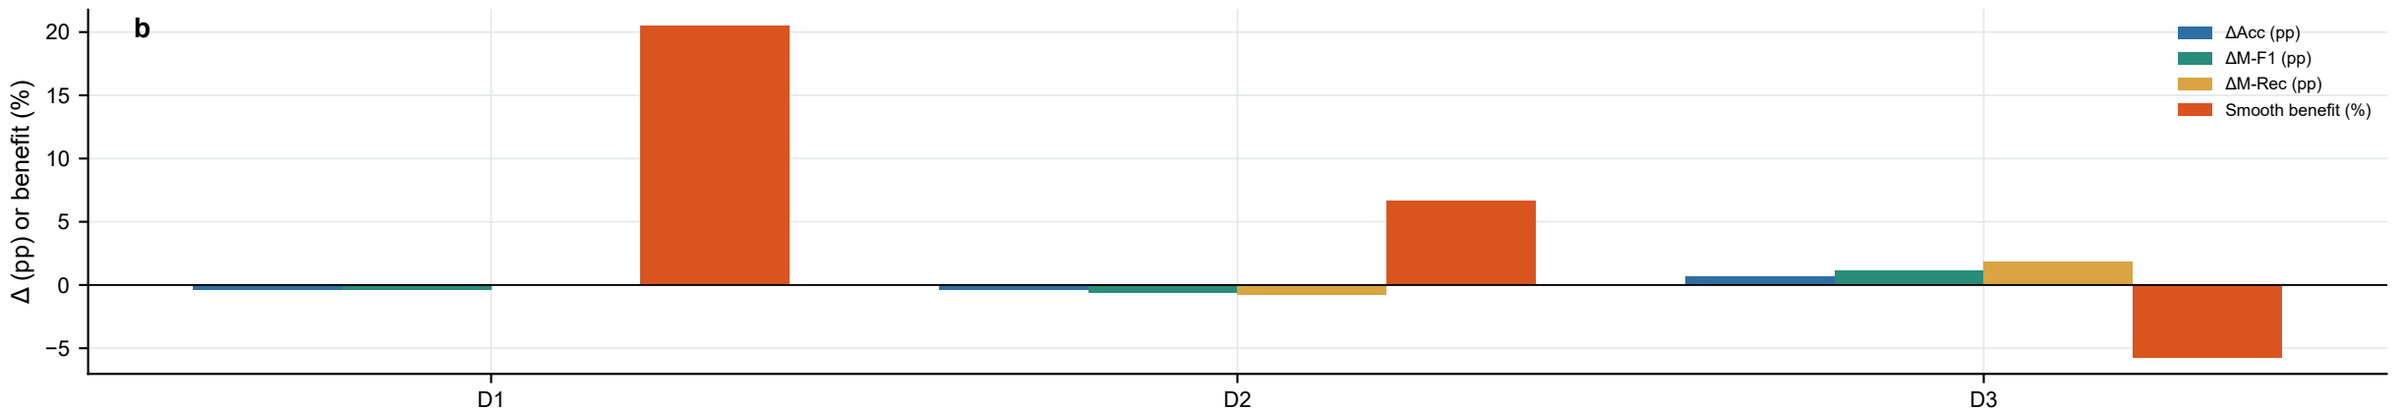
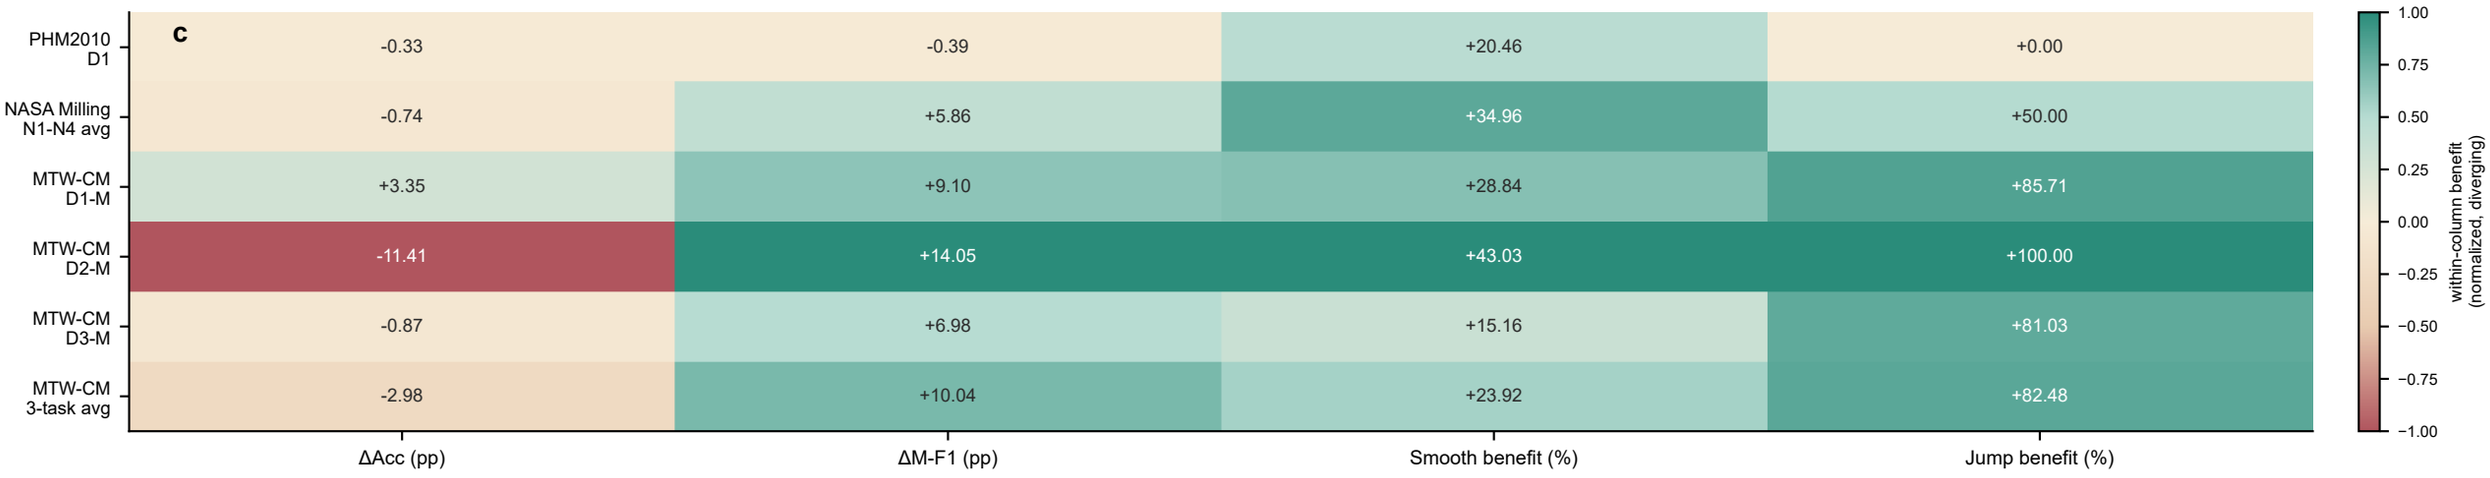
Within-task normalized performance, D1/D2/D3 × 9 methods
(color = within-task-and-metric benefit; numbers = raw values; outline = DC-PSR)



Multi-task TCN-GRU → DC-PSR paired delta, PHM D1/D2/D3
(Smooth benefit = Smooth_backbone − Smooth_DC-PSR; raw Smooth never itself flipped)



Cross-dataset Multi-task TCN-GRU → DC-PSR (B11→B12) delta matrix
(teal = improvement, terracotta = regression; color per-column normalized since units mix pp and %)
